

Elena Rostova, M.Sc.

Principal Distributed Systems Architect & Performance Engineer

📍 Seattle, WA ✉ elena.rostova@example.com ☎ +1 (555) 439-0192 🌐 github.com/erostova

EXECUTIVE SUMMARY

Distinguished software architect with 14+ years of leadership in high-throughput browser rendering platforms, zero-copy distributed serialization pipelines, and enterprise developer tools. Specializes in browser layout internals, performance auditing, and headless Chromium print automation.

PROFESSIONAL EXPERIENCE

Principal Systems Architect — Vanguard Technologies

2022 – Present

- Spearheaded modernization of global document synthesis cluster processing over 45M monthly PDF exports.
- Implemented SIMD-accelerated text layout measurement and CSS paged media normalization.
- Eliminated cross-page element slicing through automated pre-print DOM pagination algorithms.

Staff Browser Platform Engineer — Chromium Cloud Labs

2018 – 2022

- Engineered low-latency headless browser worker pool maintaining sub-80ms invocation times.
- Fixed critical layout thrashing patterns across large multi-table DOM trees in print media mode.
- Authored developer documentation and CI linting suites for printable web applications.

Senior Full-Stack Engineer — DataStream Analytics

2014 – 2018

- Designed real-time transactional reporting dashboards with seamless PDF export capabilities.
- Constructed resilient table pagination components featuring automatically repeated headers.

KEY TECHNICAL PROJECTS

Project Lead & Designer — BreakFlow Core

Open Source (2026)

- Created a renderer-agnostic pagination engine that analyzes HTML and fixes page breaks prior to PDF generation.
- Developed greedy scoring heuristic with penalty configuration and isolated iframe measurement sandbox.

TECHNICAL PROFICIENCIES

Core Languages

TypeScript, Rust, C++, Go, Python

Browser & Rendering

Chromium Internals, CSS Paged Media, Skia, Playwright, Vitest

Cloud & DevOps

Kubernetes, Docker, AWS, GCP, GitHub Actions, Terraform
